

Plastic Carrier

21 Silage Film Holder

Carry Silage Film For a Whole Day

The problem with modern day round bales and bale wrappers is a lack of storage space for extra silage film rolls. Modern farming operations which operate around the clock in the summer months, with operations far from the main farming location, this can cause logistical issues in acquiring silage film rolls to the balers and wrappers so they can continue to operate effectively and quickly. Our 21 silage film roll holder is an effective solution to allow for long duration farming operations.

Extended Storage

The plastic carrier is designed with a capacity of 21 rolls, the top of the unit can have oversized rolls (net/film) attached, while the back have aluminum plate to stop and dirt being flung forward.

The sides of the plastic carrier are enclosed to protect the rolls from damage, while the top is left open to allow for ventilation of the rolls, this is to allow for the rolls to be in optimal condition for use.

Extra Options

The basic model comes in black, but we can make sure the holder will match your press or traktor for complete colour coding, while also getting your logo on the side for that extra fine look.

If you travel to lots of sites on public roads then the side lights will help you stand out in traffic and night to help reduce accidents.

Additional Logo and Operating lights can be added to the holder in the factory.

Specifications
